Task and Workflow Management System Using JIRA

Project Report

Submitted To:-

Ms. Disha Handa

Submitted By:-

Name: - Komal Mehra
UID: - 25MCA20142
Section: - 25MCA 5(A)

In partial fulfillment for the award of the degree of

Master of Computer Application

Chandigarh University

Jan 2026 – May 2026

UNIVERSITY INSTITUTE of COMPUTING
Asia's Fastest Growing University

NAAC GRADE A+ ACCREDITED UNIVERSITY

Declaration

I hereby declare that the project titled **"Task and Workflow Management System using JIRA"** has been developed by me as a part of the requirements for the degree.

This project is an original piece of work and has not been submitted to any other university or institution for the award of any degree or diploma.

The work presented in this project report is based on my own efforts and wherever contributions of others have been made, they have been duly acknowledged.

Acknowledgement

I would like to express my sincere gratitude to my project guide, **Ms. Disha Handa**, for her valuable guidance, continuous support, and encouragement throughout the development of my project titled **"Task and Workflow Management System using JIRA."**

Her insightful suggestions and constant motivation helped me to understand the concepts clearly and successfully complete this project.

I am also thankful to my teachers and the institution for providing me with the opportunity and necessary resources to carry out this work.

Lastly, I would like to thank my family and friends for their support and encouragement during the completion of this project.

Komal Mehra

Introduction

The **Task and Workflow Management System using JIRA** is designed to manage and monitor tasks in a structured and efficient manner. Jira is a widely used project management tool that helps teams to plan, track, and manage their work effectively using features like issue tracking, dashboards, reports, and workflow management.

This project focuses on using Jira to create, assign, and track tasks, manage workflows, and monitor project progress. It also helps in improving team collaboration by providing a clear view of task status, priorities, and responsibilities.

By implementing this system, users can efficiently manage their work, reduce errors, and ensure timely completion of tasks. The project highlights how modern tools like Jira can enhance productivity and streamline project management processes.

Problem Statement

In many organizations and academic projects, managing tasks and workflows manually or through unstructured methods leads to inefficiency, lack of coordination, and difficulty in tracking progress. Team members often face challenges in understanding their responsibilities, meeting deadlines, and communicating effectively.

There is a lack of a centralized system that can organize tasks, assign responsibilities, track progress, and manage workflows in a structured manner. This results in missed deadlines, duplication of work, and reduced productivity.

Therefore, there is a need for an efficient and reliable system that can streamline task management, improve collaboration, and provide real-time tracking of project activities.

The proposed **Task and Workflow Management System using JIRA** aims to address these issues by providing a structured platform for managing tasks, monitoring workflows, and enhancing overall project efficiency.

Objectives

The main objectives of the project "Task and Workflow Management System using Jira" are:

1. To develop an efficient system for managing and tracking tasks in a structured manner.
2. To organize workflows for better coordination and smooth execution of project activities.
3. To assign tasks to team members and monitor their progress effectively.
4. To improve communication and collaboration among team members.
5. To track the status of issues such as tasks, bugs, and stories in real-time.
6. To generate reports and dashboards for better analysis of project performance.
7. To reduce manual effort and minimize errors in project management.
8. To ensure timely completion of tasks and improve overall productivity.

Tools and Technologies used

The following tools and technologies were used in the development of the Jira-based Online Shopping project:

• **Jira Software:** Used for project planning, issue tracking, and workflow management. It helps in organizing tasks, assigning responsibilities, and tracking progress efficiently.

• **Agile Methodology:** Used to manage the project in an iterative manner by dividing it into Epics, Tasks, and Sub-tasks, ensuring better structure and continuous improvement.

• **Kanban Board:** Used to visually track the progress of tasks through different stages such as To Do, In Progress, and Done. It helps in maintaining workflow transparency.

• **Web Browser:** Used to access and manage the JIRA project online, as JIRA is a web-based application.

Methodology

The project "Task and Workflow Management System using Jira" follows the Agile methodology for effective planning, execution, and continuous improvement.

Agile methodology is an iterative and flexible approach that allows tasks to be completed in small phases, making it easier to manage changes and improve productivity.

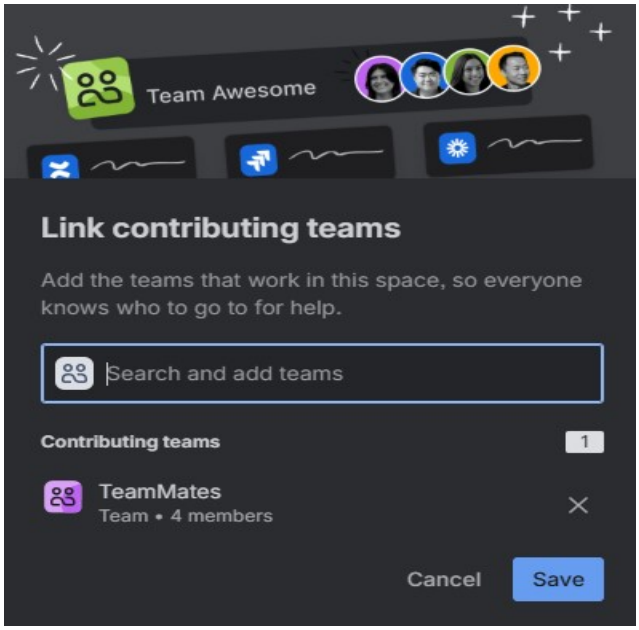
In this project, the work is divided into Epics, Tasks, and Sub-tasks to ensure better organization and clarity. Each task moves through different stages such as To Do, In Progress, and Done using a Kanban board, which helps in tracking the progress visually.

The methodology involves continuous monitoring and updating of tasks, allowing team members to collaborate effectively and complete the work within the given timeline.

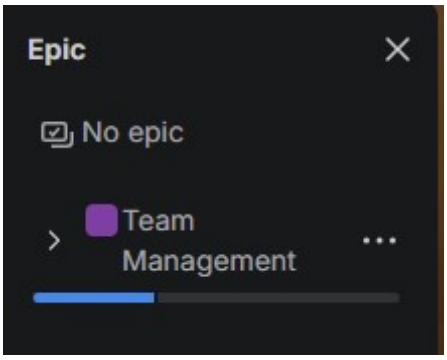
Jira is used as the primary tool to implement Agile practices, manage workflows, assign tasks, and generate reports. This approach ensures transparency, efficiency, and better control over the project activities.

Overall, the Agile-based methodology helps in improving flexibility, reducing errors, and ensuring the timely completion of the project.

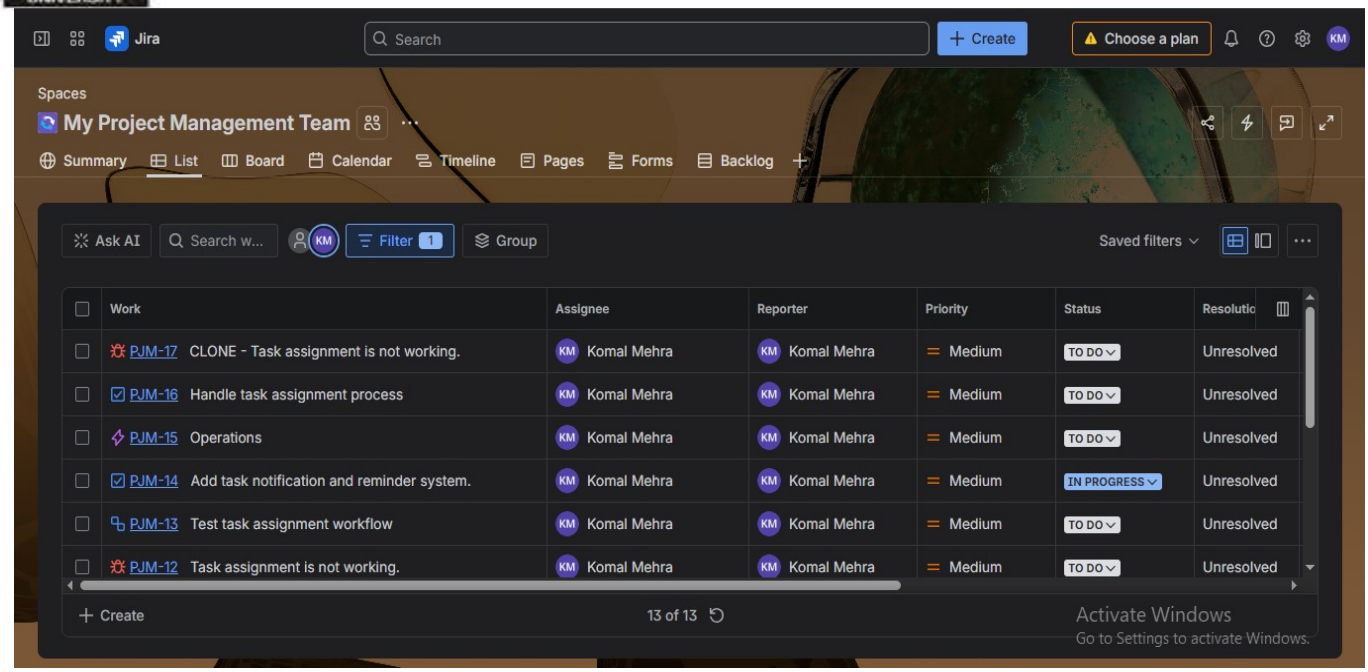
Project Workflow

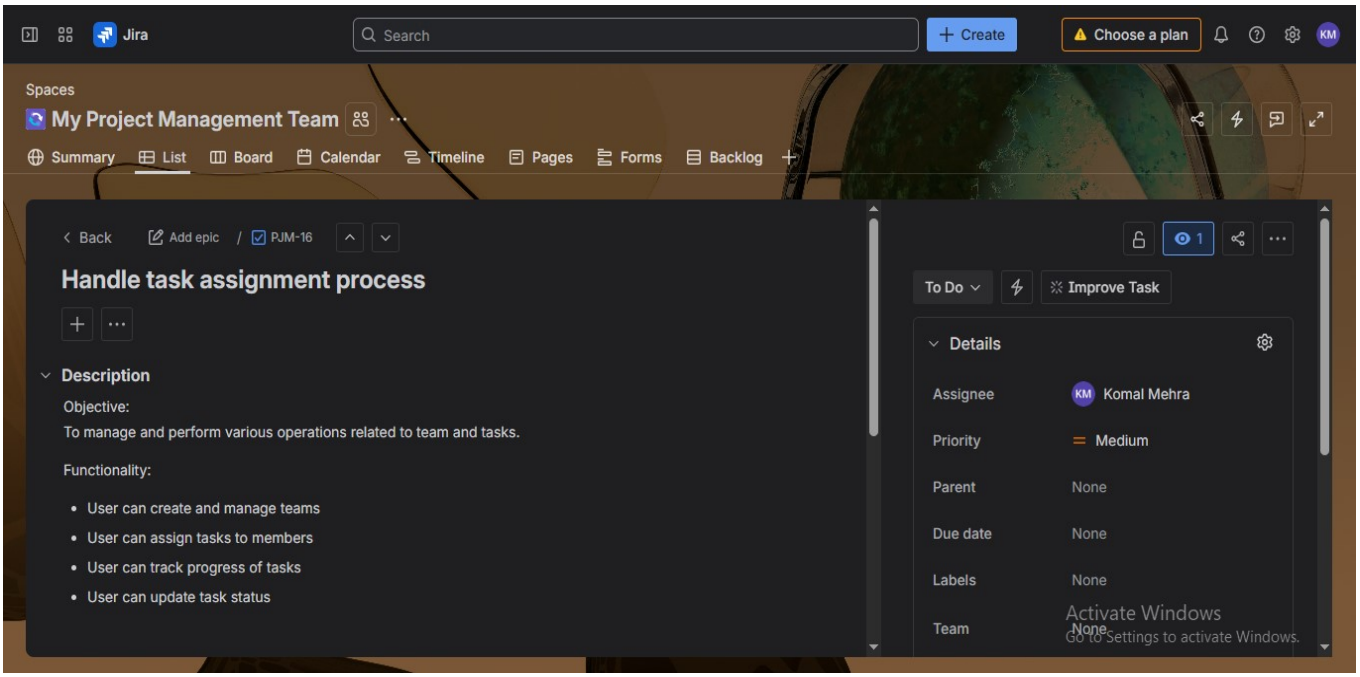


To add team in the project

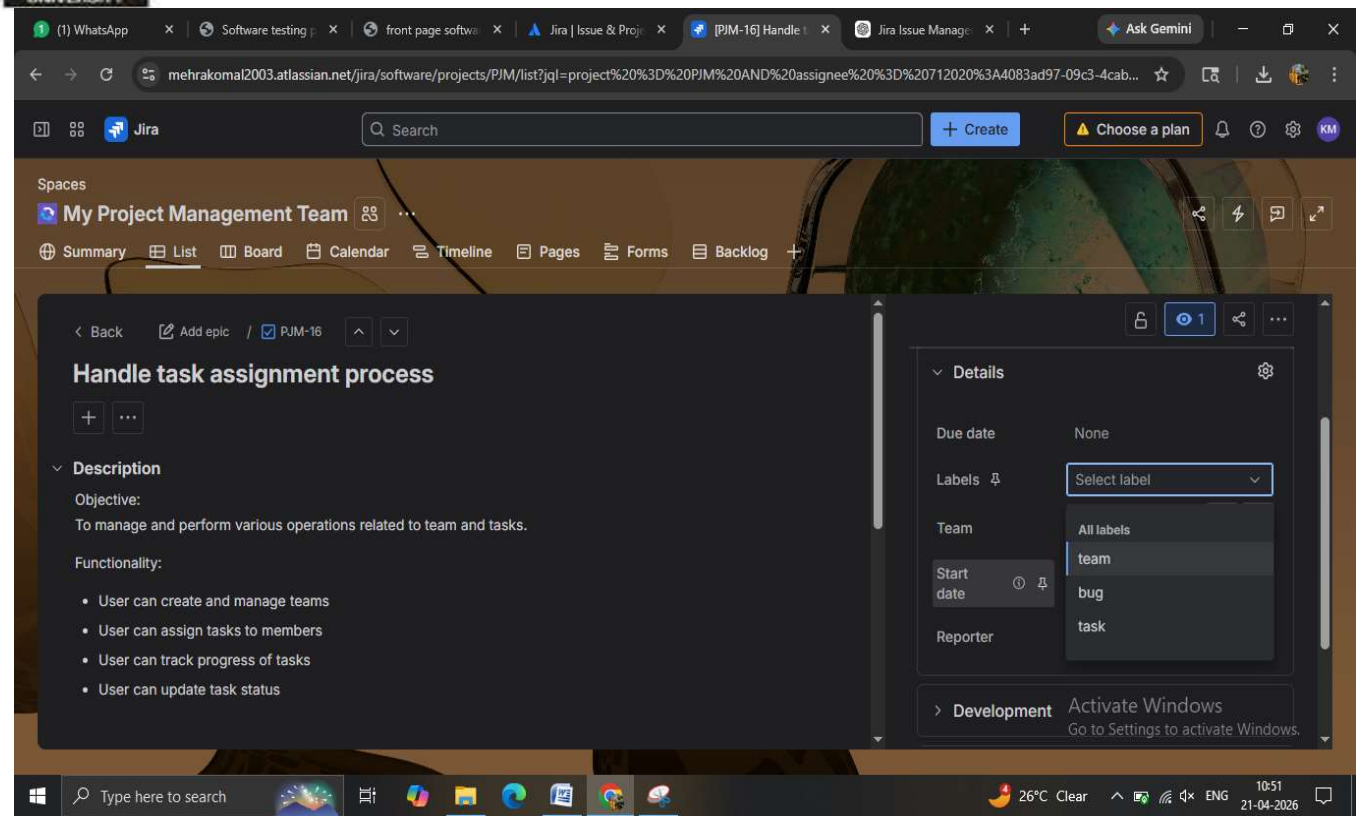


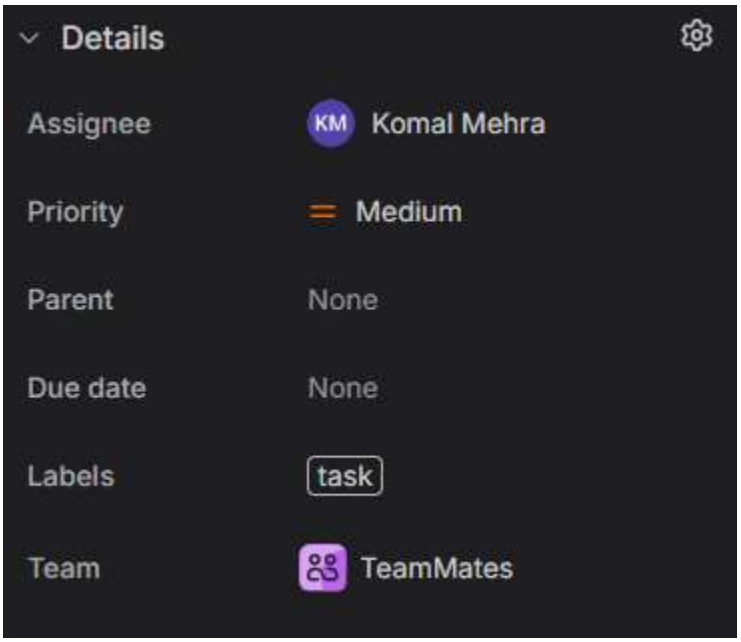
Epic:- Team Management



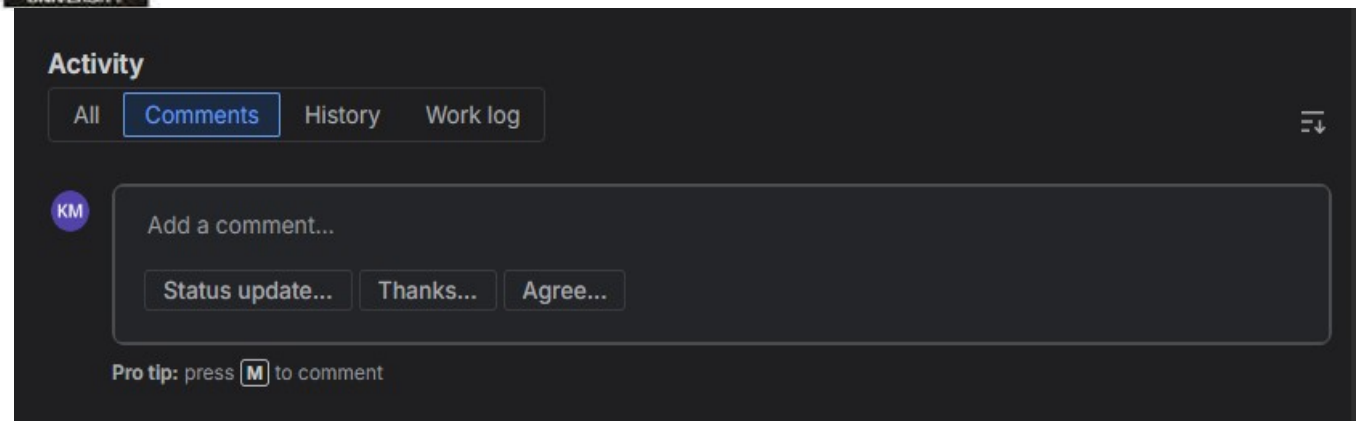


To create issues (Tasks, Subtasks, and Bugs)

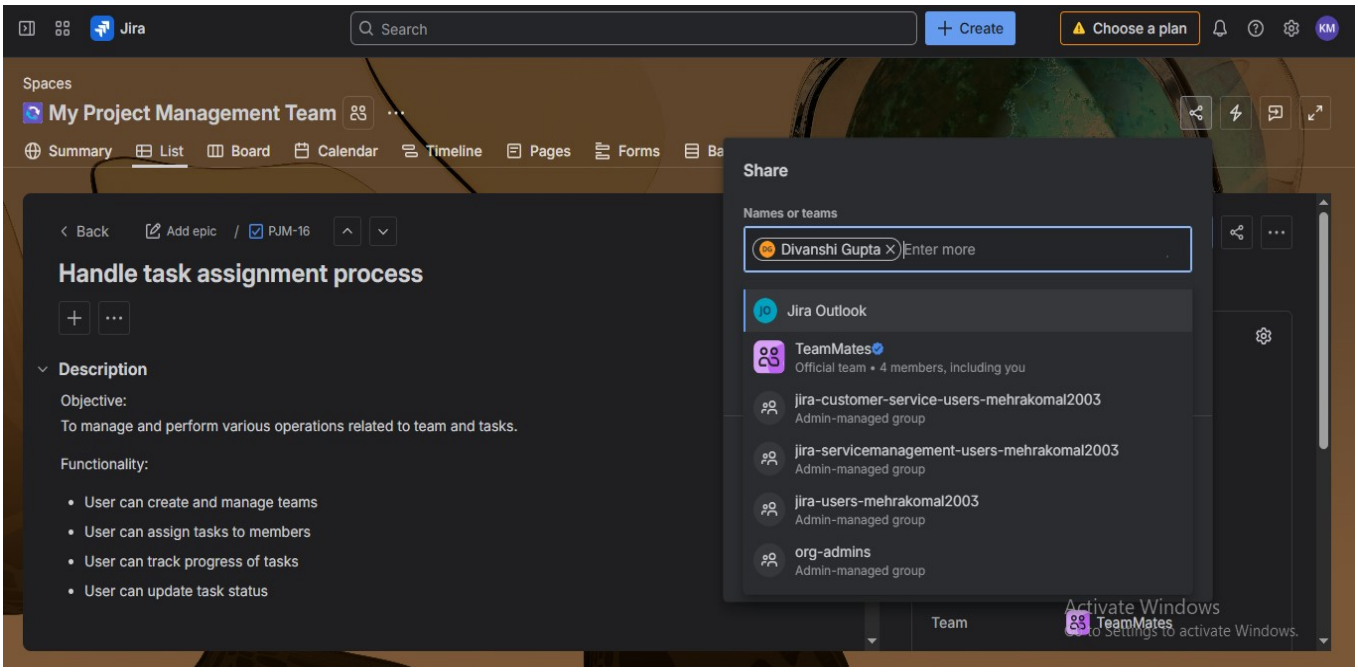




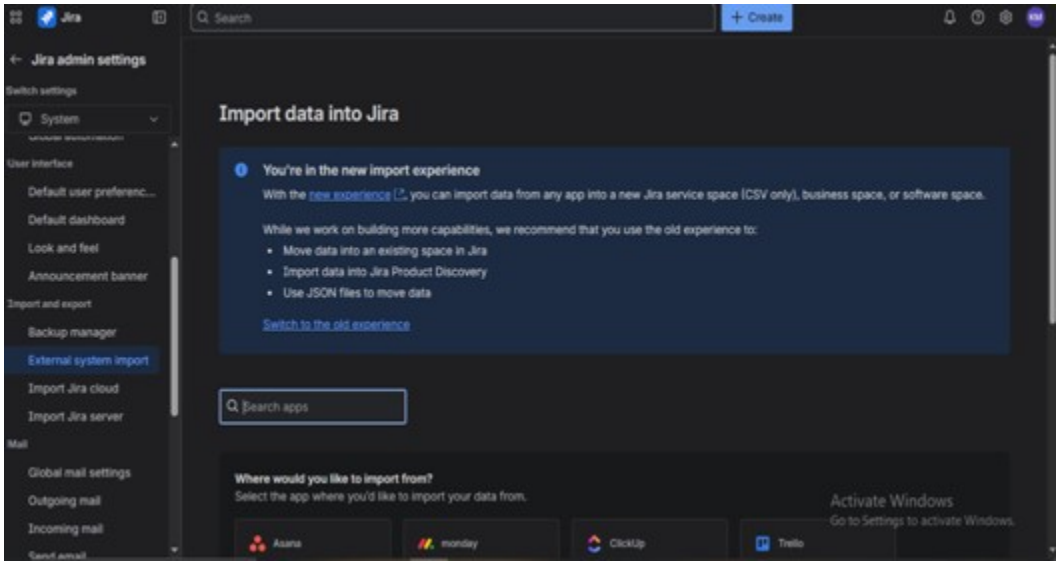
To add Labels and Assignees

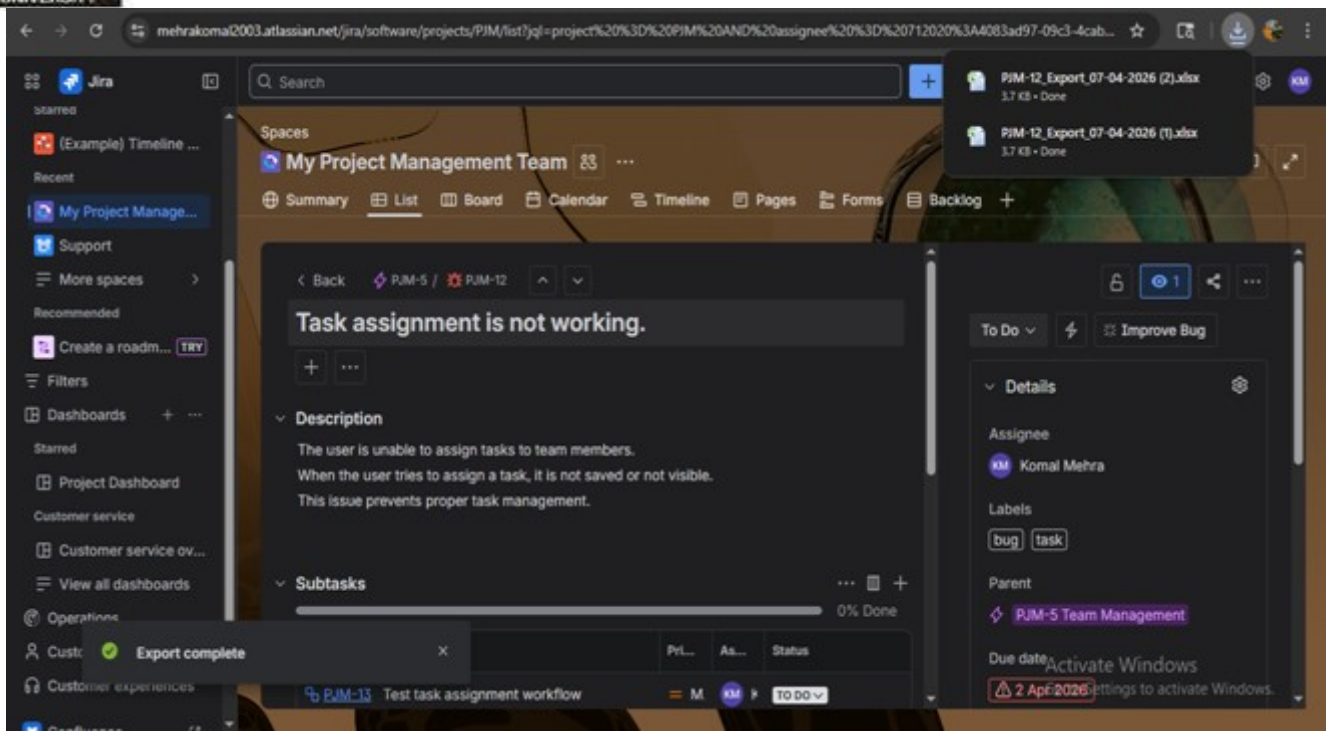


JIRA comment section showing task updates

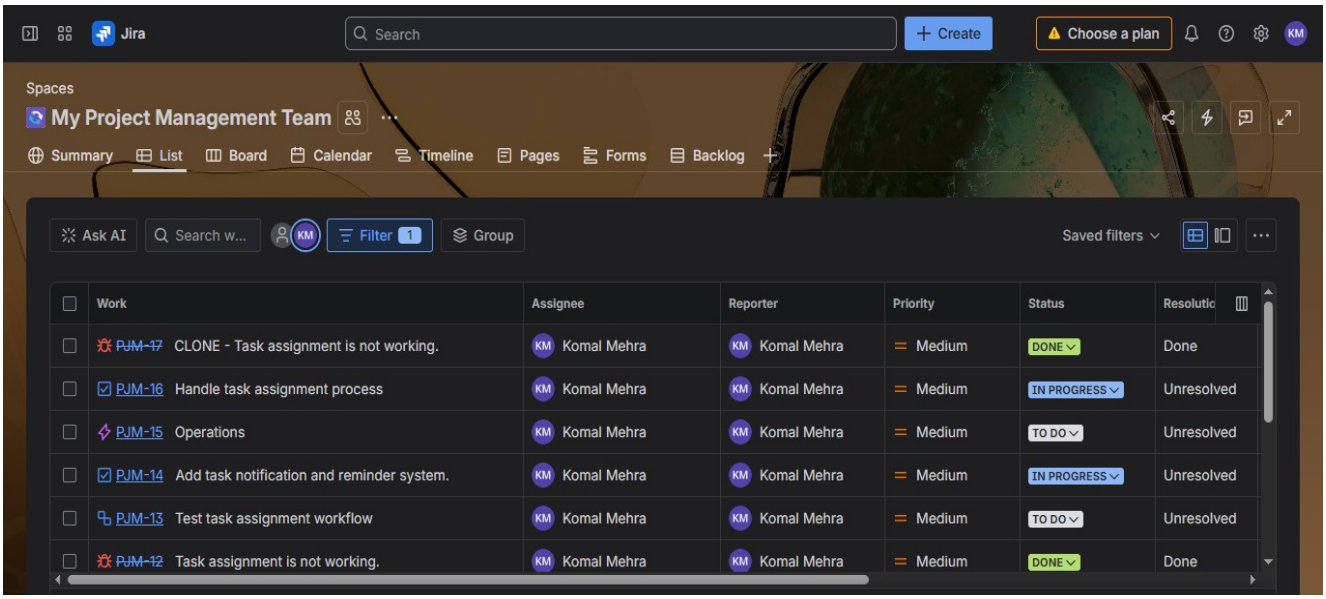


Shared Epic link for accessing project modules in JIRA

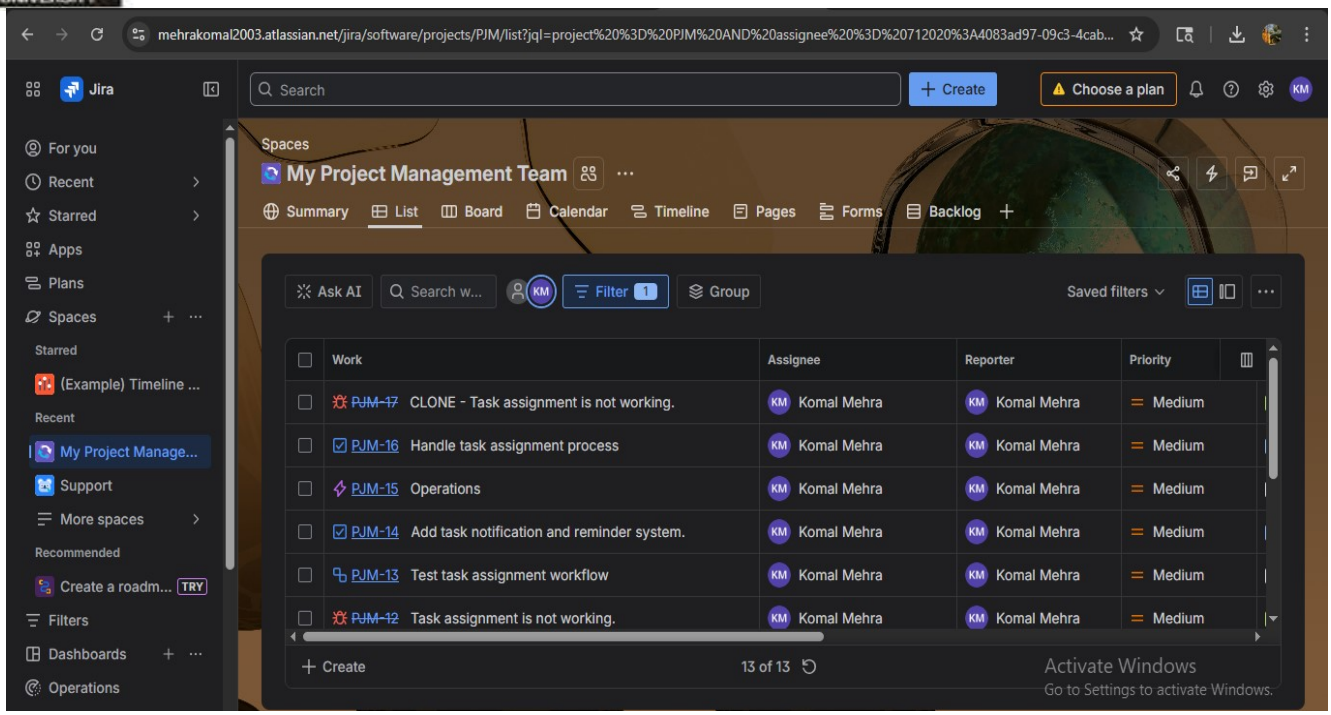




To import and export of project data



Displaying workflow (To Do, In Progress, Done)



JIRA dashboard showing overall project overview

Impact of using JIRA

The use of JIRA in the "Task and Workflow Management System" has significantly improved the overall efficiency and organization of the project.

JIRA provides a centralized platform where all tasks, issues, and workflows are managed in a structured manner. This reduces confusion and ensures that all team members have clear visibility of their responsibilities and deadlines.

The use of agile methodology through JIRA helps in breaking down the project into smaller and manageable parts such as Epics, Tasks, and Sub-tasks. This improves planning and makes it easier to track progress at each stage.

With features like dashboards and reports, JIRA enables real-time monitoring of project performance. This helps in identifying delays, bottlenecks, and areas that need improvement.

Jira also enhances team collaboration by allowing easy assignment of tasks, updates, and communication among team members. It reduces manual effort and minimizes errors in project management.

Overall, the use of JIRA has led to better workflow management, increased productivity, improved transparency, and timely completion of the project.

Importance of using JIRA

JIRA plays an important role in modern project management by providing a structured and efficient way to manage tasks and workflows.

One of the key importance of Jira is that it helps in organizing work into manageable units such as Epics, Tasks, and Sub-tasks. This makes it easier to plan, execute, and track project activities.

JIRA improves team collaboration by allowing members to assign tasks, share updates, and monitor progress in real-time. It ensures that everyone is aware of their responsibilities and deadlines.

The tool also provides dashboards and reports, which help in analyzing project performance and identifying areas that need improvement. This leads to better decision-making and effective project control.

JIRA supports Agile methodology, which allows flexibility and continuous improvement during the development process. It helps teams adapt to changes easily and deliver better results.

Overall, Jira is important because it increases productivity, reduces errors, improves transparency, and ensures the smooth execution of projects.

Conclusion

The "Task and Workflow Management System using JIRA" successfully demonstrates how a structured approach can improve project management efficiency. The use of JIRA helps in organizing tasks, managing workflows, and tracking progress in a clear and systematic manner.

By implementing agile methodology, the project is divided into smaller and manageable parts, making it easier to plan and execute. Features like dashboards, reports, and issue tracking provide better visibility and control over project activities.

The system also enhances team collaboration by clearly defining roles and responsibilities, reducing confusion, and ensuring timely completion of tasks.

Overall, the project highlights the importance of using modern tools like Jira in managing projects effectively. It helps in improving productivity, minimizing errors, and achieving project goals in an efficient manner.
